Evening Brief

Date/Time Stamp: **Monday, August 15, 2016 - 10:01 PM**

Weather Summary

*** Mixed Dry/Lightning again possible Wed/Thu across Northern NV/UT/WY ***

A series of weak low pressure systems will move east across the Great Basin this week bringing chances of thunderstorms to many areas through Thursday. However, temperatures will still remain several degrees above normal in most areas this week.

The first low brought isolated high based showers to northern NV last night with only a few very isolated thunderstorms. This low and **isolated, high based mix of wet/dry thunderstorms** will move east today over southeast Idaho, western Wyoming, northeast Nevada and northern Utah. Due to very dry low levels, gusty outflow winds 40-50 mph should be expected near thunderstorms.

Moisture remains over eastern portions of the Great Basin through Thursday for daily afternoon showers and thunderstorms, mainly over the higher terrain and across south/east Utah into western WY.

Western/Northern Nevada and western Idaho look to remain fairly dry early this week, but could see some isolated dry thunderstorms Wed/Thu this week and this should be monitored as fuels are still extremely dry. A dry cold front may also drop into ID/WY later this week bringing gusty winds.

Preparedness Levels

Current:

Great Basin	4
National	3

Great Basin Fire Activity: Light Initial Attack

New Fires and Acres: 16 fires for 870 acres / 2587 acres Large Fire Growth

Resources:

- Helicopters assigned within the Great Basin
 - 17 Type 1 Helicopters
 - 15 Type 2 Helicopters
 - 28 Type 3 Helicopters
- 106 Crews are committed within the Great Basin
 - 17 IHCs committed within the Great Basin
 - 26 Type 21A Crews committed within the Great Basin
- The Great Basin has processed 5,536 Overhead orders since June 1st.

Great Basin Fire Potential Summary

ERC's are still quite high across the north and west where conditions have remained generally dry. Isolated dry lightning chances will continue over parts of northeast Nevada into northwest UT/western WY today, with additional lightning possible in the very dry areas of western and northern NV again Wed/Thu to keep fire potential elevated. Overall fire danger will remain low over southern and eastern Utah as moisture moves into those areas.

A Fuel and Fire Behavior Advisory is also in effect for the Northern half of Nevada, Southwest Idaho and Northwest Utah.
